

- Biocompatible-made of all natural Chitosan-based polymers
- Minimizes bleeding and edema after surgery
- Easily conforms to nasal anatomy
- Offers easier placement with a superior field of view
- No special storage conditions required

### PRODUCT DESCRIPTION:

**PosiSep® X** is a hemostatic intranasal splint designed to minimize bleeding and edema and to prevent adhesions between the septum and the nasal cavity. **PosiSep® X** is placed in the nasal cavity after surgery or trauma. The **PosiSep®** line is constructed of a patient-comfortable sponge which is manufactured from naturally occurring Chitosan polymers. Subsequent irrigation will cause the product to fragment, thus optimizing patient tolerance and comfort.

- Fragments by way of gentle irrigation and aspiration
- Easy to apply-no mixing or additional prep time necessary
- Widely studied and published anti-adhesion properties of N,O-carboxymethyl chitosan (NOCC)

*"diagram not to scale"*

A small, smooth PosiSep® X sponge is inserted into the nasal cavity where it begins to quickly expand after irrigation. PosiSep® X can be cut into smaller sections for optimal placement.

### Before Hydration

### After Hydration

When PosiSep X is hydrated, it expands to fill the space preventing post-op adhesions.

### What is Chitosan?

Chitosan (ky-toe-san) comes from a substance known as chitin, an amino-polysaccharide removed from the powdered shells of crustaceans.

**For more information on PosiSep® products please contact your distributor**

### ORDERING INFORMATION

PosiSep® X is available in two sizes. See ordering information below.

#### Description:

PosiSep® X Hemostat Dressing/Intranasal Splint 1.5 cm x 5.1 cm/ 8pk

PosiSep® X Hemostat Dressing/Intranasal Splint 1.3 cm x 3.8 cm/ 8pk

#### How Supplied:

PosiSep® X is packaged eight (8) sterile, single use units per carton. One (1) sterile unit contains one (1) Hemostat Dressing/Intranasal Splint. PosiSep® is terminally sterilized by gamma irradiation.
